

A whole new way to monitor water consumption and protect your facility.

Imagine knowing when a faucet or fixture begins to leak — or getting an alert when a catastrophic water failure occurs. Not only is this kind of real-time information critical for protecting your facility, it's also the key to managing your overall water usage and saving money in the long run.

Introducing T&S WaterWatch: It's a true foodservice first — giving operators a cost-effective solution for monitoring water consumption, detecting leaks and optimizing conservation measures.

HOW DOES WATERWATCH WORK?

WaterWatch uses a non-invasive smartphone-sized device that **attaches to your facility's main water line**. By listening to the unique sound signatures of the water flow, WaterWatch collects thousands of measurements every second from the pipe and translates those measurements to accurate water insights — **identifying exactly which fixtures are using water** and for how long. WaterWatch can even distinguish between simultaneous water use events.

All it takes is a 7-day learning period, **using your facility's WiFi** connection, for WaterWatch to provide daily consumption updates and real-time leak detection. **Using special algorithms** and machine learning, WaterWatch identifies abnormal usage and **sends text alerts** to immediately notify operators of major leaks so corrective action can be taken. Reports are easily accessible using a mobile app or PC and provide information on smaller potential leak events and a more comprehensive understanding of your facility's overall water usage.

HOW DOES WATERWATCH HELP YOU USE WATER SMARTER?

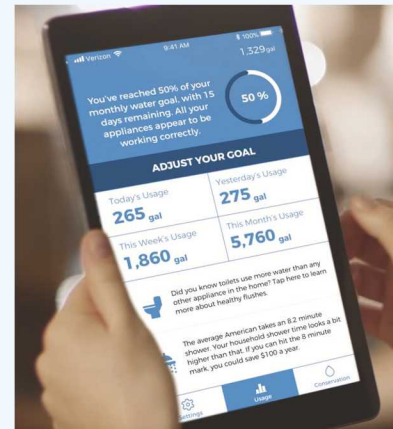

Receive immediate notification of leaks and burst pipes	Saves thousands in potential damage and lost revenue
Know exactly where your water is going	Data and reporting available detailing water usage by fixture
Compare historical and current data	Easily determine if water conservation efforts are working
Pinpoint opportunities for improvement	Compare water usage within a certain region or across your entire chain
Analyze data and identify water-saving opportunities	Take advantage of T&S' deep industry experience, working together — all at no extra charge

To learn more about how WaterWatch can help your facility save water and reduce costs, visit [<landing page URL>](#) today.

IT'S EASY TO GET STARTED.

- 1 Simply purchase and register your device
- 2 Attach it to your facility's main water line and plug it in to your nearest power outlet
- 3 Connect it to WiFi

There's no cutting and no plumber required!

ACCESS YOUR DATA QUICKLY THROUGH AN EASY-TO-USE APP.

All water data collected by WaterWatch is available via the app — whether you have one facility or multiple locations to monitor. The app makes it easy to filter and organize your data by a number of categories, including average usage, usage by source, specific dates or dayparts, and more.
